

## Heading One: Statistics

## Heading Two: Operations Research Lecturer

- Circa \$80,000 starting package p.a.
- Pursue Statistical Research for the Real World

RMIT is a global university of technology based in Melbourne, with a commitment to and reputation for high quality professional and vocational education and research engaged with industry and community. It is a forward thinking employer that offers all employees great benefits including: flexible, family friendly policies, onsite childcare and gymnasium facilities, discounted public transport tickets and myriad professional development opportunities.

The RMIT School of Mathematical and Geospatial Science (SMGS) is looking for a qualified lecturer with a background in delivering Statistics and Operations Research courses to undergraduate and postgraduate students. We are looking for an energetic and lively individual who is experienced and open to new and creative learning models, able to apply an outcomes focused, student-centred approach to teaching. You should also have made some contributions to research and possess potential for grant applications. The ability to build strong and collaborative links with industry is also highly sought after

The School is active and successful in the area of ARC Research Grant Funding – in fact, we are currently working with industry sectors to map and model sports statistics including footy tipping. Other areas of research focus are in financial statistics, ecological modeling, quality control, reliability studies and logistics.

Refer to our position description on the website for information relating to necessary qualifications required as part of your application. For further information on this opportunity please contact Professor Panlop Zeepongsekul on +613 9925 3224 or email [panlopz@rmit.edu.au](mailto:panlopz@rmit.edu.au).

Applications close 31 July, 2008.
